MAYET MENGIST

Full-Stack Application Developer | AI-Powered Web Applications

Ethiopia · mayamayet23@gmail.com · github.com/mayetmaya · mayet-mengist.vercel.app

PROFESSIONAL SUMMARY

Full-stack developer and control systems engineer (MSc, Control Systems Engineering; BSc, Electrical Engineering) with eight years of technical experience. Completed a six-month full-stack bootcamp at Evangadi (2026) and built deployed applications with React, Node.js, Express and MySQL, including an AI-powered forum with Gemini embeddings, semantic search and retrieval-augmented generation (RAG). Systems-oriented problem solver seeking a junior full-stack role or apprenticeship.

TECHNICAL SKILLS

Frontend	React, JavaScript, HTML5, CSS3/CSS Modules, Vite, React Router, Axios, responsive design
Backend	Node.js, Express, REST API design, JWT authentication, bcrypt, role-based access control, validation, rate limiting
Data	MySQL, SQL, relational modelling, CRUD, file uploads (Multer)
AI Integration	Gemini API, prompt design, text embeddings, semantic search (cosine similarity), RAG pipelines
Control & Electrical	PLC, HMI, SCADA, MCC & PCC, electrical plant/system design, fault-finding, safety practice
Tools	Git, GitHub (branches, pull requests), npm, VS Code, Vercel deployment, debugging

SELECTED PROJECTS

AI-Powered Evangadi Forum — Full-Stack Q&A Platform **GitHub** · **Live Demo**

React, Vite, Node.js, Express, MySQL, JWT, Gemini API

- Built secure authentication (bcrypt, JWT, protected routes, admin/member roles) and full question, answer and threaded-reply workflows with ownership-based authorization.
- Implemented AI features: semantic question search and related-question recommendations using Gemini embeddings and cosine similarity, plus an AI Draft Coach and Answer Fit feedback.
- Developed a RAG knowledge base: PDF/TXT upload, text extraction, chunking, chunk embeddings, document-grounded answers and summaries; layered MVC/service architecture (919 commits).

Netflix-Inspired Movie Discovery App — Team Project (10 students) **GitHub** · **Live Demo**

React, Vite, JavaScript, Axios, React Router, Swiper, TMDB API

- Contributed to a responsive movie-browsing interface with reusable components, carousels and data fetched asynchronously from the TMDB REST API; collaborated through GitHub branches, pull requests and Trello.

ChatGPT-Style Chat Application **GitHub** · **Live Demo**

React, Vite, Node.js, SQL database

- Built a full-stack chat app (React frontend, Node.js backend) with authentication, chat APIs, saved conversations for signed-in users, and guest chat protected by IP-based rate limiting (20 messages per 15 minutes).

PROFESSIONAL EXPERIENCE

Senior Technical Assistant 5 years

Bahir Dar University Systems Design · Troubleshooting · Technical Support

- Provided technical work in an academic environment, supporting laboratories, equipment and systems through methodical troubleshooting and technical support.
- Supported student experiments and research activities: set up systems, collected data and validated results against expected system behaviour.

Senior Control System Engineer 3 years

Practical electrical and control systems work PLC · HMI · SCADA · MCC & PCC

- Designed electrical plant systems and worked with PLC, HMI, SCADA, MCC and PCC equipment, applying hands-on installation and fault-finding with a disciplined, safety-aware approach.

EDUCATION

MSc, Control Systems Engineering, Bahir Dar University 2025 · CGPA 3.85

BSc, Electrical Engineering, Bahir Dar University 2019 · CGPA 3.45

Full-Stack Development Bootcamp, Evangadi (React, Node.js, MySQL, AI integration, RAG) 2026
